Machine learning-Iris classification

Load Dataset

In [18]:

```
from  sklearn import  datasets
iris=datasets.load_iris()
```

Train X And Y

In [9]:

```
x=iris.data
y=iris.target
```

       2, 2, 2, 2, 2, 2, 2, 2, 2, 2, 2, 2, 2, 2, 2, 2, 2, 2])
```

Splitting the dataset:

In [12]:

```
from sklearn.model_selection import train_test_split
x_train,x_test,y_train,y_test=train_test_split(x,y,test_size=.5)
```

Build the model

In [13]:

```
from sklearn import tree
classifier=tree.DecisionTreeClassifier()
```

Train the Model

In [14]:

```
classifier.fit(x_train,y_train)
```

Out[14]:

```
DecisionTreeClassifier(class_weight=None, criterion='gini', max_depth=None,
                       max_features=None, max_leaf_nodes=None,
                       min_impurity_decrease=0.0, min_impurity_split=None,
                       min_samples_leaf=1, min_samples_split=2,
                       min_weight_fraction_leaf=0.0, presort=False,
                       random_state=None, splitter='best')
```

Make predictions:

In [15]:

```
predictions=classifier.predict(x_test)
```

In [16]:

```
from sklearn.metrics import accuracy_score
print(accuracy_score(y_test,predictions))
```

```
0.96
```

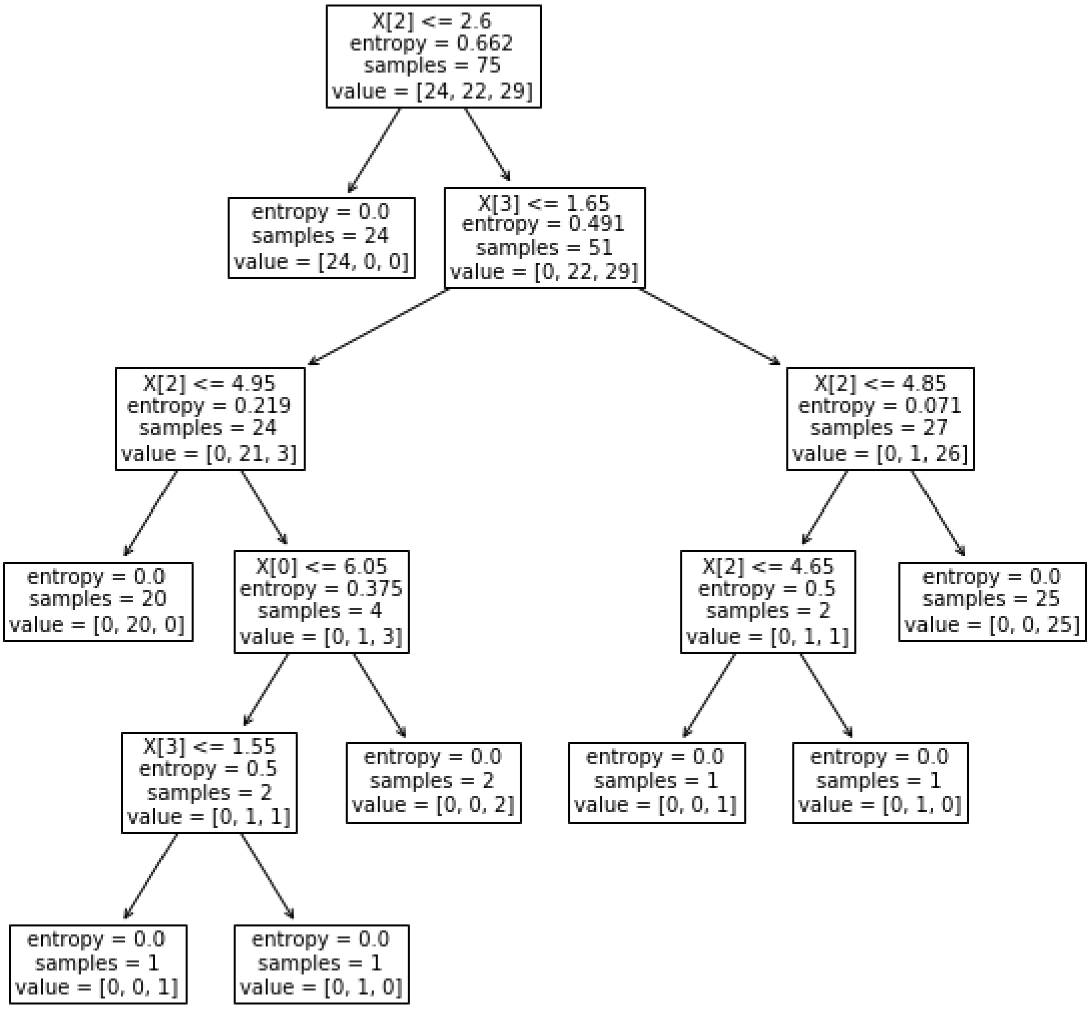
Plotting decision tree

In [20]:

```
import matplotlib.pyplot as plt
```

In [21]:

```
fig, ax = plt.subplots(figsize=(10, 10))
tree.plot_tree(classifier, fontsize=10)
plt.show()
```



So the Accuracy is 96%
